

# Video Deconstruction and Reconstruction

## Assignment Directions:

Choose a partner to work with for this assignment and sit beside them. Open a word document to take down important information. Watch the video **Fracking Explained**.

<https://www.youtube.com/watch?v=Uti2niW2BRA>

While watching look for the following items while you **DECONSTRUCT** it. We will watch the video three times and you can watch it as many times as you wish.

- A. What is the question of the video? Is there more than one? List.
- B. Using the debatable question list the reasons that are given to answer the question and follow each reason with the example to support the reason if they give one.
- C. List the counter argument reasons that are given and follow each reason with an example to support the reason if they give one.
- D. List the conclusion the video gives to answer the question.
- E. Perform a raven exercise for the video. Answer all RAVEN with information not judgements. Then write a two sided validation with a final judgement.
- F. Research at least two other sources to support one reason and one counter reason. List reason and label examples with pertinent information. Do this for both sides.
- G. Create an annotated bibliography for the assignment. (at least 5 sources including the original video)
- H. Write a two sided validation with a judgement for each source you used.
- I. Write a one paragraph conclusion as to why you feel we should frack or not. Use your reasons discovered above. Include your personal judgement.
- J. Create a PowerPoint for your own partnered Fracking Video.

## Rubric for assignment:

1. Both students will receive the same grade so work together and share responsibilities #1 - #7 on the checklist or described in A-J above.
2. All assignments must be complete.
3. Assignment must be completed by due date.
4. Items 1-7 count as one grade. (see partnered knowledge instructions)

Kurzgesagt (German for „in a nutshell“) is a Munich based design studio with a distinctive perspective on design and animation within the fields of education, science and commerce.

Founded in 2013 by Philipp Dettmer & Stephan Rether, the studio engages in information design projects of all kinds. We love science, minimalism, colors and music. But most of all combining them to tell stories
